

# CONTENTS

## 1. MATRIX ALGEBRA

- Matrix
- Types of Matrices
- Equal Matrices
- Addition of Matrices
- Scalar Multiplication of a Matrix
- Multiplication of Matrices
- Properties of Matrix Multiplication
- Positive Integral Power of a Square Matrix
- Zero Divisors
- Illustrative Example
- Exercise

## 2. SOME SPECIAL TYPES OF MATRICES

- Transpose of a Matrix
- Some Theorem on Transposed Matrix
- Symmetric Matrix
- Skewsymmetric Matrix
- Conjugate of a Matrix
- Conjugate Transpose of a Matrix
- Hermitian Matrix
- Skew Hermitian Matrix
- Some Theorems
- Idempotent Matrix
- Nilpotent Matrix
- Involutory Matrix
- Orthogonal Matrix

- Unitary Matrix
- Singular Matrix
- Some Theorems
- Differentiation of Matrices
- Integration of a Matrix
- Trace of a Matrix
- Cyclic Theorem
- Theorem
- Illustrative Examples

### **3. DETERMINANTS**

- Determinants
- Leading or Principal Terms
- Expansion of a Determinant
- Properties of Determinants
- Properties of Determinants
- Products of Two Determinants
- Minor
- Co-factor
- Solution of Linear Equations by Determinants
- Conditions of Consistency for a (Non-homogeneous) System of three Linear Equations in Two Unknown
- Conditions of Consistency for a Homogeneous System of Three Linear Equations in Three Unknown
- Differentiation of a Determinant
- Integration of a Determinant
- Illustrative Examples
- Miscellaneous Illustrative Examples
- Miscellaneous Exercise

### **4. AJOINT AND INVERSE OF A MATRIX**

- Adjoint of a Matrix
- Some Theorems
- Inverse of a Matrix
- Some Theorems on Inverse of a Matrix
- Illustrative Examples
- Exercise

## **5. ELEMENTARY OPERATIONS**

- Elementary Operations
- Some Theorems on Elementary Operations
- Equivalent Matrices
- Theorems on Equivalent Matrices
- Computation of the Inverse of a Matrix by Elementary Operations
- Triangular Matrix
- Reduction of Matrices to Triangular Form
- Partitioning of Matrices
- Identically Partitioned Matrices
- Matrices Partitioned Conformably for Multiplication
- Illustrative Examples
- Exercise

## **6. RANK OF A MATRIX**

- Minor of a Matrix
- Rank of a Matrix
- Nullity of a Matrix
- Normal Form
- Some Theorems on Rank
- Illustrative Examples
- Exercise

## **7. LINEAR EQUATIONS**

- Linear Equations
- Solution of a System of  $n$  Non-homogeneous Linear Equations in  $n$  Unknowns
- Solution of  $m$  Non homogeneous Linear Equations in  $n$  Variables
- Some Theorems on Consistency of Equations
- Homogeneous Linear Equations
- Illustrative Examples
- Exercise

## **8. LINEAR DEPENDENCE OF VECTORS**

- Ordered Set of Numbers
- Vectors
- Algebra of Vectors
- Linear Dependence and Linear Independence of Vectors
- Linear Combination of Vectors
- Some Basic Theorems
- The  $n$ -Vector Space
- Sub-Space of an  $n$ -Vectors Space  $V_n$
- Row Rank of a Matrix
- Column Rank of a Matrix
- Invariance of Row Rank under E-row Operations
- Invariance of Column Rank under E-column Operations
- Invariance of a Column Rank Under E-row Operations
- Theorem
- Equality of Row Rank, Column Rank, and Rank
- Rank of a Sum
- Theorem
- Illustrative Examples

## **9. CHARACTERISTIC ROOTS AND VECTORS**

- Characteristic Value Problem
- Some Fundamental Theorems
- Cayley Hamilton Theorem
- Computation of the inverse by Cayley-Hamilton Theorem
- Illustrative Examples
- Exercise

## **10. DIAGONALIZATION OF MATRICES**

- Introduction
- Polynomials of Matrices
- Diagonalizable Matrix
- Necessary and Sufficient Condition for Diagonalization
- Theorem
- Theorems on Diagonalizing Matrix
- Illustrative Examples
- Exercise

## 11. BILINEAR, QUADRATIC AND HERMITIAN FORMS

- Bilinear Forms
- Canonical Forms
- Equivalent bilinear forms
- Co-gredient Transformation
- Contragredient Transformations
- Quadratic Form
- Linear Transformations
- Congruence of matrices
- Congruence of Quadratic Forms or Equivalence of Quadratic Forms
- The linear transformation of a quadratic form
- Congruent reduction of a symmetric matrix
- Reduction of a real quadratic form
- Definite, Semi-definite and Indefinite Real Quadratic Forms
- Results on Definite and Indefinite Forms
- Gram Matrices
- Quadratic Form Over a Complex Field
- Hermitian Forms
- Linear Transformations of a Hermitian Form
- Conjugate Matrices
- Elementary Conjugate Transformation
- Conjugate Reduction of a Hermitian Matrix
- Definite and Indefinite Hermitian Forms
- Illustrative Examples
- Exercise

## 12. SIMILARITY

- Similarity
- Diagonalization
- Some Results on Similarity
- Illustrative Examples
