

# CONTENTS

## **1. Discrete time Signals and Systems**

- 1.1 Introduction
- 1.2 Classification of Signals
- 1.3 Singularity Functions
- 1.4 Classification of Systems

## **2. Z-transform**

- 2.1 Introduction
- 2.2 Definition
- 2.3 Region of Convergence
- 2.4 Properties of Z-Transform
- 2.5 Inverse Z-transform

## **3. Convolution and Correlation**

- 3.1 Convolution definition
- 3.2 Properties of Convolution
- 3.3 Types of Convolution
- 3.4 Correlation Definition
- 3.5 Types of Correlation

## **4. Fourier Transform**

- 4.1 Introduction
- 4.2 Discrete Time Fourier Transform
- 4.3 Properties DTFT
- 4.4 Relation between DTFT and Z-Transform
- 4.5 Discrete Fourier Transform
- 4.6 Properties of DFT
- 4.7 Fast Fourier Transform
- 4.8 IDFT using FFT algorithm

## **5. Realization of Digital Filters**

- 5.1 Introduction

5.2 Structures of FIR filters

5.3 Structures of IIR filters

## **6. Infinite impulse response Filters**

6.1 Introduction

6.2 Basic Filter Types

6.3 Analog to Digital transformation Techniques

6.4 Butterworth filter Approximation

6.5 Chebychev filter Approximation

6.6 Frequency transformation on analog domain

## **7. Finite impulse response Filters**

7.1 Introduction

7.2 Linear Phase FIR filter

7.3 Frequency response of Linear Phase FIR filters

7.4 Design Technique of FIR filters

7.5 Design of FIR filters using Fourier series method

7.6 Design of FIR filters using Windows technique

7.7 Design of FIR filters using Frequency Sampling method

## **8. Finite Word Length Effects in Digital Filters**

8.1 Introduction

8.2 Number representation

8.3 Quantisation

8.4 Overview of Effects of Finite Register Length in DSP

8.5 Signal scaling

## **9. Digital Processing on Continuous signals**

9.1 Introduction

9.2 Sampling of Continuous Time signals

9.3 Sampling Theorem

9.4 Anti-aliasing filter

9.5 Sample and Hold filter

9.6 A/D converter

9.7 D/A converter

9.8 Reconstruction Filter

## **10. Multivariate Digital Signals Processing**

10.1 Introduction

10.2 Decimation by factor D

10.3 Decimation by factor I

10.4 Sampling rate conversion by a rational factor  $I/D$

10.5 Filter design and implementation for sampling rate conversion

10.6 Sampling rate conversion by arbitrary factor

10.7 Energy Density Spectrum

- 10.8 Wiener Khintchine theorem
- 10.9 Periodogram
- 10.10 Estimation of the autocorrelation and power spectrum of random signals
- 10.11 Use of DFT in power spectrum estimation
- 10.12 Non-parametric methods of Power Spectral Estimation
- 10.13 Applications of Multirate signal processing

## **11. Digital Signal Processors**

- 11.1 Introduction to DSP processor
- 11.2 Harvard Architecture
- 11.3 TMS320C5X
- 11.4 TMS320C54X

## **Index**
