Some of Elias set the continuation. Exact converter fatuos if muestra       in negligtas; Los who without Muestran en negritos approaches. Data published by El Nist EN 2008. [2]   Variangte Heat of La Tabla InternationalsObour Las propities Del Vapor 4.1868 J Heat heat 4.1840    * J Heat (15    C) 4.18580 J Heat (20    C) 4.18190    * C) Origen La Heat FUE defined by first time by El Profesor Nicolas Clan 1824 as a heat-kilograms and the French and English dicarios during El Period  nia that is between 1842 and 1867. La Heat emergence as consecution de la theor   f del cal  ma: if supon  f  f  , heat if the heat transmission if program by El Paso de a union fluid (El Calico) of UN CUERPO to OTRO. ESA CANTIDAD OF SALE   CO Discarded Caloric Theory, and recognized the physical fact that heat is a manifestation of energy, calorie was defined as a unit of unity system (and later from the technical system of units). Currently, Calorie is not included in the International System of Units. Metabolism and calories The calorie that was previously used in biology, medicine and nutrition, had the value of a kilocalus, was attributed the symbol      Cala   (with C mayoucle) to differentiate it from the appropriate calories. Symbol of lime and sometimes was called a large calorie. This custom was replaced in favor of kilocaloria (kcal) and calories (CAL), which in turn is present and, as a consequence of the application of the food labeling rules, [4]       at least in the most developed countries. The information that appears in the riots is indicative of the value of the energy that the food has in question for a number of pronitious food (100 grams) and is usually expressed in Joules (J) and yet , between Paris, in calories (lime; little by little, the Kilocalus of the rhodules will disappear [needed name]. The caloric content is used as a mediation unit of ingested food and thus elaborating proper and often   low-calorie   diets (usually assume a reduction of 30%) [5] to   
